Syntax
Examples
Related links

Displays user, group and privileges information for the user who is currently logged on to the local system. If used without parameters, **whoami** displays the current domain and user name.

Syntax

```
whoami [/upn | /fqdn | /logonid]
whoami {[/user] [/groups] [/priv]} [/fo <Format>] [/nh]
whoami /all [/fo <Format>] [/nh]
```

Parameters

Expand table

Parameter	Description
/upn	Displays the user name in user principal name (UPN) format.
/fqdn	Displays the user name in fully qualified domain name (FQDN) format.
/logonid	Displays the logon ID of the current user.
/user	Displays the current domain and user name and the security identifier (SID).
/groups	Displays the user groups to which the current user belongs.
/priv	Displays the security privileges of the current user.
/fo <Format>	Specifies the output format. Valid values include: **table** Displays output in a table. This is the default value. **list** Displays output in a list. **csv** Displays output in comma-separated value (CSV) format.
/all	Displays all information in the current access token, including the current user name, security identifiers (SID), privileges, and groups that the current user belongs to.
/nh	Specifies that the column header should not be displayed in the output. This is valid only for table and CSV formats.
/?	Displays help at the command prompt.

Examples

To display the domain and user name of the person who is currently logged on to this computer, type:

```
whoami
```

Output similar to the following appears:

```
DOMAIN1\administrator
```

To display all of the information in the current access token, type:

```
whoami /all
```
