Create an unsigned MSIX package for testing

Article • 01/09/2023 • 2 minutes to read • 5 contributors

Feedback

As of Windows 11, you can install your app via PowerShell without needing to sign your package. This feature is intended to make it easier for you to quickly test your app. Don't use this feature to distribute your app widely.

Create an unsigned package

An unsigned package must include a special OID (organization ID) value in its **Identity** element in the manifest file, otherwise it won't be allowed to register. An unsigned package will never have the same identity as a package that's signed. That prevents unsigned packages from conflicting with, or spoofing the identity of, a signed package.

Here's an example.

XML

Copy

...

<Identity Name="NumberGuesserManifest" Publisher="CN=AppModelSamples, OID.2.25.311729368913984317654407730594956997722=1" Version="1.0.0.0" />
