# Potential Shadow Credentials added to AD Object

Identify the modification of the msDS-KeyCredentialLink attribute in an Active Directory Computer or User Object. Attackers can abuse control over the object and create a key pair, append to raw public key in the attribute, and obtain persistent and stealthy access to the target user or computer object.

**Rule type:** query

**Rule indices:**

- winlogbeat-\*
- logs-system.\*

**Severity:** high

**Risk score:** 73

**Runs every:** 5 minutes

**Searches indices from:** now-9m ([Date Math format](#), see also [Additional look-back time](#))

**Maximum alerts per execution:** 100
