Hiding files via an AlternativeDataStream (ADS) on a ntfs file system is quite well known.  
Hiding folders via \$index\_allocation was new to me, but old. Found infos from 2010, e.g. [soroush.me/blog/2010/12/a...](https://t.co/1HMyWaDr23) Crazy behaviour on Win10/11.  
Finally a safe place to hide your "homework".
