Opening or viewing unsupported file formats

If the file format that users want to use isn't supported, they can try the following methods to open the file.

- Search the internet for a company that makes file format converters for file formats that aren't supported in the application.
- Save to a file format that another program supports. For example, users might want to import their Word, Excel, or PowerPoint file into another program that doesn't support the application's native file format. However, the other program might support importing another supported file format, such as a text file format. In this case, users can save their work in text file format, and then from the other program, import the text file.
