

Search notes:

Registry: HKEY_CURRENT_USER\Keyboard Layout\Preload

The values under HKEY_CURRENT_USER\Keyboard Layout\Preload seem to represent the [keyboard](#) layouts a user can choose from on the taskbar (see [quick language list](#)). These values are the hexadecimal representation of a [language id](#).
A more humanly readable form of these ids is found in [HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Keyboard Layout\DosKeybCodes](#). (For example 807 for Swiss German (sg) or 409 for United States (us)).

The value whose name is 1 seems to be the default keyboard layout.

Misc

The [PowerShell cmdlet](#) `get-winUserLanguageList`.
