## How to uninstall OneLaunch browser (Removal guide)

📅 December 14, 2020

### What is OneLaunch

**OneLaunch** is supposed to be a good browser experience, but according to many users it is a browser based on Chromium with a form of software whose main goal is various methods of earning money from victims. Adware can generate revenue by changing victim's web-browser settings to redirect to web sites. Aside from causing annoyance, it also can slow down the PC.

When you are performing searches using the OneLaunch web browser, the search results will be returned from Yahoo Search engine. The devs behind this ‘ad-supported’ internet browser are most likely doing this to make advertisement revenue from the advertisements shown in the search results.

Another reason why you need to remove adware is its online data-tracking activity. Adware software has access to your personal information (your IP address, what is on your computer, etc.) and is looking for it on the Internet, with the goal of passing it on to third parties.

Welcome to Myantispyware

**Myantispyware asks for your consent to collect your personal data to:**

You should remove adware and malware from your device. You can find the useful instructions in the article: [How to remove unwanted ads for free.](#)

## How does OneLake work on a computer?

Usually, adware gets into your system through installing software, downloading programs, sharing files and connecting to the Internet. The creators of the software put adware within their program's installation setup file. In order to avoid this, you should select only manual, custom or Advanced setup type and reject all bundled applications in which you are unsure.

How to remove OneLaunch adware without any software

In most cases, it is possible to manually get rid of OneLaunch adware. This solution does not involve the use of any tricks or removal tools. You just need to recover the normal settings of the personal computer and internet browser. This can be done by following a few simple steps below. If you want to quickly delete OneLaunch , as well as perform a full scan of your device, we recommend that you run adware removal tools, which are listed below.

Kill OneLaunch processes

Press CTRL, ALT, DEL keys together.

Click Task Manager. Select the processes then right-click it and

Your personal data will be processed and information from your device (cookies, unique identifiers, and other device data) may be stored by, accessed by and shared with [134 TCF vendor\(s\) and 63 ad partner\(s\)](#), or used specifically by this site or app.

Some vendors may process your personal data on the basis of legitimate interest, which you can object to by managing your options below. Look for a link at the bottom of this page to manage or withdraw consent in privacy and cookie settings.

If your Task Manager does not open or the Windows reports “Task manager has been disabled by your administrator”, then follow the guide: [How to Fix Task manager has been disabled by your administrator](#).

Disable OneLaunch Start-Up

Select the “Start-Up” tab, look for something similar to the one shown in the example below, right click to it and select Disable.

Close Task Manager.

### Delete OneLaunch Tasks

Type “Task Scheduler” in the search bar. Click Task Scheduler app in the search results. Click “Task Scheduler Library” in the left panel. On the right panel, right-click to “OneLaunchLaunchTask” and select Delete. Delete also “OneLaunchUpdateTask”.

Close Task Scheduler.

### Uninstall OneLaunch

Check your computer installed unwanted and questionable applications. If you recognize or are no longer using them, then you may need to run an

Zemana Anti-malware is a malware scanner that is very useful for detecting and deleting adware and other unwanted software. The steps below will explain how to download, install, and use Zemana to scan and remove malware, spyware, adware, PUPs, browser hijackers from your device for free.

Zemana can be downloaded from the following link. Save it on your Windows desktop.

When downloading is done, close all apps and windows on your computer. Open a directory in which you saved it. Double-click on the icon that’s named

Zemana.AntiMalware.Setup as on the image below.

When the installation starts, you will see the “Setup wizard” that will allow you set up Zemana Free on your computer.

Once setup is complete, you will see window as shown on the screen below.

Now click the “Scan” button to begin checking your personal computer for the adware. This process can take some time, so please be patient. While the Zemana AntiMalware (ZAM) is scanning, you can see number of objects it has identified either as being malicious software.

After the scan is complete, Zemana Anti-Malware will display a list of all items found by the scan. Make sure to check mark the items that are unsafe and then click “Next” button.

The Zemana Anti-Malware (ZAM) will

## How to stay safe

Run ad-blocking application to block malvertisements, pop-ups and adware browser plug-ins to improve performance and impact your privacy anonymously and stay safe online.

1. Download AdGuard from

2. After the download is done, start the downloaded file. You will see the “Setup Wizard” program window. Follow the prompts.
3. When the setup is complete, press “Skip” to close the installation application and use the default settings, or click “Get Started” to see an quick tutorial which will help you get to know AdGuard better.
4. In most cases, the default settings are enough and you don’t need to change anything. Each time, when you run your PC, AdGuard will start automatically and stop unwanted ads, block malicious and misleading web-pages. For an overview of all the features of the application, or to change its settings you can simply double-click on the icon called AdGuard, which is located on your desktop.

## To sum up

Now your PC should be free of the OneLaunch adware and other unwanted software. We suggest that you keep AdGuard (to help you block unwanted advertisements and intrusive harmful web-pages) and Zemana Free (to periodically scan your PC system for new adware software and other malware). Probably you are running an older version of Java or Adobe Flash Player. This can be a security risk, so download and install the latest version right now.
