How it works

You create VPN tunnel from your PC to our server using free OpenVPN software and define port forwarding rule to forward requests from Internet through our server to your local machine. It works even you do not have real IP address or your incoming traffic is blocked. You can forward HTTP traffic to your local web-server as well as any TCP or UDP traffic. If your web-server has virtual hosts configured, you can specify which one you are connecting to.

HTTP/HTTPS, TCP or UDP

Use any application you need

Firewall

Limit access to certain IP/networks

Unlimited bandwidth

Traffic never ends

All OS support

Windows, Linux, MacOS, dd-wrt

Custom domain name

Use yourname.portmap.io or redirect your own domain

Host headers

Specify which virtual host to connect
