Homoglyph Attack Generator

This app is meant to make it easier to generate homographs based on Homoglyphs than having to search for look-a-like character in Unicode, then coping and pasting. Please use only for legitimate pen-test purposes and user awareness training. I also recommend webapp developers use it to test out possible user impersonation attacks in their code. This is still a work in progress, so please send me suggestions (especially for new Homoglyphs to add). While this tool was designed with making IDNA/Punycode names for putting into DNS to display foreign characters in a browsers URL bar, it can be used for other systems that accept Unicode. I don't know how different the output is, but I'd love to hear exp

For more information, see [Homoglyph Attacks to Obfuscate URLs for Phishing](#)

Your personal data will be processed and information from your device (cookies, unique identifiers, and other device data) may be stored by, accessed by and shared with [134 TCF vendor\(s\)](#) and [63 ad partner\(s\)](#), or used specifically by this site or app.

Some vendors may process your personal data on the basis of legitimate interest, which you can object to by managing your options below. Look for a link at the bottom of this page to manage or withdraw consent in privacy and cookie settings.

Manage options

Consent

1st, type in a name to look like:

2nd, choose homoglyphs to use:

3rd, Output will be something like this: Output appears here.

4th submit so PHP can generate the IDNA/Punycode:

Submit

Unicode URL to give out:
Encoded label to set up in DNS:

Below is phlyLabs original converter if you want to try taking the Homograph back and forth:

Original (Unicode)

Punycode (ACE)

IDNA 2008

Encode >>

<< Decode

PHP code based on examples and libraries from phlyLabs Berlin; part of [phlyMail](#)
Also thanks to <http://homoglyphs.net> for helping me find more glyphs.

Changes:
11/28/2017: Added đ as sugested by rockethamster. 3/11/2012: Added option to use 'Right-To-Left Override' (U+202E) so you can do some stupied EXE tricks, and added a linkless output so you can copy& paste your homoglyphy without formatting. 3/11/2012: Added / for /. 4/3/2012: I found a list of IDN blacklist. 3/6/2012: Added ı. 3/5/2012: Added ʝ. 15 most used homoglyphs added.
