The Set-NetFirewallRule cmdlet modifies existing firewall rule properties. This cmdlet gets one or more firewall rules to be modified with the Name parameter (default), the DisplayName parameter, or by group association using the DisplayGroup or Group parameter. Rules cannot be queried by property in this cmdlet, but the querying can be done by the Get-NetFirewallRule cmdlet and piped into this cmdlet. The remaining parameters modify the properties of the specified rules. If the DisplayGroup or Group parameter is specified, then all sets associated with the specified group receive the same modifications.

To move a rule to a new GPO, copy the existing rule using the Copy-NetFirewallRule cmdlet with the NewPolicyStore parameter, then remove the old rule with this cmdlet.

REMARKS

Examples

EXAMPLE 1

```
PS C:\>Set-NetFirewallRule -DisplayName "AllowWeb80" -
RemoteAddress "192.168.0.2"
```

This example changes a rule to match a different remote IP address of a web server for which traffic is allowed by a rule.

EXAMPLE 2

```
PS C:\>Set-NetFirewallRule -DisplayGroup "Windows Firewall
Remote Management" -Enabled True
```

This cmdlet shows an alternate way to enable all of the rules in a predefined group.

```
PS C:\>Enable-NetFirewallRule -DisplayGroup "Windows Firewall
Remote Management"
```

This example enables all of the rules in a predefined group.

▼ About this capture

### EXAMPLE 3

```
PS C:\>Set-NetFirewallRule -DisplayName "AllowMessenger" -
Authentication Required -Profile Domain
```

- [about\\_ActiveDi](#)

- [about\\_Classes](#)
- [about\\_Commar](#)
- [about\\_Commar](#)
- [about\\_Commer](#)
- [about\\_Commo](#)
- [about\\_Compari](#)
- [about\\_Continue](#)
- [about\\_Core\\_Co](#)
- [about\\_Data\\_Se](#)
- [about\\_Debugge](#)
- [about\\_Desired](#)
- [about\\_Do](#)
- [about\\_Environn](#)
- [about\\_Escape](#)
- [about\\_Eventlog](#)
- [about\\_Executio](#)
- [about\\_For](#)

This example changes a rule to require authentication and scopes the rule to apply on the domain profile. A separate IPsec rule must exist to perform the authentication.
