API Gateway

Go from code to global in just minutes with a developer-friendly, idiomatic solution for managing traffic to your APIs.

[Learn more →](#)

Device Gateway

Standardize connectivity across your fleet of IoT devices running in external networks. No need to struggle with custom protocols.

[Learn more →](#)

Want cool ngrok swag? Take our user survey! ->

Kubernetes Operator

Simplify ingress with the Kubernetes Operator, using Ingress Controller or Gateway API, by offloading traffic management and security to ngrok's global network.

[Learn more →](#)

Global Load Balancer

Ensure high performance and availability by routing traffic to the nearest Point of Presence (PoP) with preconfigured global load balancer.

Webhook Testing

Get a secure public URL for your local web server, then trigger webhooks. Inspect the traffic to your server and replay webhook requests to iterate quickly while staying in context.

[Learn more →](#)

Developer Preview

Demo a website or an app running on your local machine to a client or stakeholder instantly and securely, without deploying to a staging environment.

Pay only for what you use

Ditch high upfront costs and pay only for active endpoints and successful API calls. Scale your costs in line with your API traffic growth.

[Get started for free](#)

How it works

ngrok operates a global network where it accepts traffic to your upstream services from clients.

Clients connect to your endpoints (URLs). You configure policies such as authentication or transformation. Unlike traditional proxies, ngrok doesn't rely on IP forwarding. Instead, you run a lightweight agent that connects securely to ngrok's network. Traffic flows through this secure connection to your service.

BUILT FOR developers.

Unlock the power of SaaS. Built to deliver applications and APIs with zero networking configuration and zero hardware. Run your apps anywhere and bring them online in just one line.

No need to know anything about networking

No more ports, IPs, DNS, or firewall configurations.
Just URLs and identities.

The ngrok platform

Zero Trust

Add SSO, Mutual TLS, IP Policy, and webhook signature verification.

Want cool ngrok swag? Take our user survey! ->

Any protocol

Native support for HTTP, TLS, and any TCP based protocol.

Observability

Log all traffic and account activity.

Global Network

Deliver fast and reliable services powered by our Points of Presence.

Want cool ngrok swag? Take our user survey! ->

ngrok

Authorization

Protect services with OAuth, SAML and OIDC.

Instant domains

Use a ngrok domain with no setup or bring your own domain.

Get started for free →

Encryption

Automatic certificates and an A+ SSL report card with no config.
