SYNOPSIS

Installs a security support provider (SSP) dll.

Author: Matthew Graeber (@mattifestation)

License: BSD 3-Clause

Required Dependencies: None

Optional Dependencies: None

SYNTAX

```
Install-SSP [-Path] <String>]
```

DESCRIPTION

Install-SSP installs an SSP dll. Installation involves copying the dll to %windir%\System32 and adding the name of the dll to HKLM\SYSTEM\CurrentControlSet\Control\Lsa\Security Packages.

EXAMPLES

----- **EXAMPLE 1** -----

```
Install-SSP -Path .\mimilib.dll
```

PARAMETERS

-Path

{{Fill Path Description}}

This is the latest development version

Some features may not yet be available in the published stable version. Read the [stable version of this documentation](#).

INPUTS

OUTPUTS

NOTES

The SSP dll must match the OS architecture. i.e. You must have a 64-bit SSP dll if you are running a 64-bit OS. In order for the SSP dll to be loaded properly into lsass, the dll must export SpLsaModelInitialize.
