WMIC CSPRODUCT – Using WMI To Identify Make and Model of Hardware

[Leave a reply](#)

Often used in MDT to ensure certain drivers or applications only get installed on certain hardware types, WMI queries on Model are very useful for Windows deployments to physical machines.

The following command will return the Make/Vendor of the hardware:

```
1 | wmic csproduct get vendor
```

Vendor
Hewlett-Packard

The following command will return the Model of the hardware:

```
1 | wmic csproduct get name
```

Name
HP Compaq 8000 Elite SFF PC

For reference – the list below shows the results for various HP hardware which I have needed to deploy:

- HP Compaq 6200 Pro SFF PC
- HP Compaq 8000 Elite CMT PC

Privacy & Cookies

We, WordPress.com, and our advertising partners store and/or access information on your device and also process personal data, like unique identifiers, browsing activity, and other standard information sent by your device including your IP address. This information is collected over time and used for personalised ads, ad measurement, audience insights, and product development specific to our ads program. If this sounds good to you, select "I Agree!" below. Otherwise, you can get more information, customize your consent preferences for over 51 different ad vendors, or decline consent by selecting "Learn More". Note that your preferences apply to all websites in the [WordPress.com network](#), and if you change your mind in the future you can update your preferences anytime by visiting the Privacy link displayed under each ad or by using the "Privacy" option in the Action Bar located at the bottom-right corner of the screen. One last thing, our partners may process some of your data based on legitimate interests instead of consent but you can object to that by choosing "Learn More" and then disabling the Legitimate Interests toggle under any listed Purpose or Partner.
