Feedback

In this article

- [Required permissions](#)
- [Syntax](#)
- [Related links](#)

Schedules commands and programs to run periodically or at a specific time, adds and removes tasks from the schedule, starts and stops tasks on demand, and displays and changes scheduled tasks.

Note

The **schtasks.exe** tool performs the same operations as **Scheduled Tasks** in **Control Panel**. You can use these tools

together and interchangeably.

Required permissions

- To schedule, view, and change all tasks on the local computer, you must be a member of the Administrators group.
- To schedule, view, and change all tasks on the remote computer, you must be a member of the Administrators group on the remote computer, or you must use the `/u` parameter to provide the credentials of an Administrator of the remote computer.
- You can use the `/u` parameter in a `/create` or `/change` operation if the local and remote computers are in the same domain, or if the local computer is in a domain that the remote computer domain trusts. Otherwise, the remote computer can't authenticate the user account specified, and it can't verify that the account is a member of the Administrators group.
- The task you plan to run must have the appropriate permission; these permissions vary by task. By default, tasks run with the permissions of the current user of the local computer, or with the permissions of the user specified by the `/u` parameter, if one is included. To run a task with permissions of a different user account or with system permissions, use the `/ru` parameter.

Syntax

```
schtasks /change  
schtasks /create  
schtasks /delete  
schtasks /end  
schtasks /query  
schtasks /run
```

Parameters

 Expand table

| Parameter | Description |
|---------------------------------|---|
| schtasks change | Changes one or more of the following properties of a task: <ul style="list-style-type: none">The program that the task runs (/tr)The user account under which the task runs (/ru)The password for the user account (/rp)Adds the interactive-only property to the task (/it) |
| schtasks create | Schedules a new task. |
| schtasks delete | Deletes a scheduled task. |
| schtasks end | Stops a program started by a task. |
| schtasks query | Displays tasks scheduled to run on the computer. |
| schtasks run | Starts a scheduled task immediately. The run operation ignores the schedule, but uses the program file location, user account, and password saved in the task to run the task immediately. |
