Confluence trick to create pages from blueprint templates

MENU

You can easily create a **HTML** Link or **ACTION BUTTON** to create faster a page from Blueprint Template.

PUT THIS URL in the LINK:

https://jira.XXX.XXX/wiki/pages/createpage-entervariables.action?templateId=**XXXXXX**&spaceKey=**YYYYY**&title&newSpaceKey=**YYYYYY**&fromPageId=**ZZZZ**

Replace the **XXXXX** variable by the ID of the Blueprint Template

Replace the **YYYYY** variable by the ID of the Space

Replace the **ZZZZZ** variable by the ID of the actual page root

How we can create a BluePrint plugin?
