ZoomIt v7.1

This update to ZoomIt adds audio capture to screen recording.

ProcDump 2.0 for Linux

ProcDump for Linux, a flexible tool for manual and trigger-based process dump generation, receives two new .NET GC triggers (-gcm and -gcgen) and updates the existing memory trigger to allow for multiple thresholds.

Process Explorer v17.05

This update to Process Explorer, an advanced process, DLL, and handle viewing utility, fixes a crash generated by the process list, fixes a bug with thread affinity decoding on systems with multiple processor groups (more than 64 processors / cores), and makes Escape key handling more consistent.

RDCMan v2.93

This update to RDCMan, a tool for managing and connecting to Remote Desktop sessions, re-enables the option to scale thumbnails under the display settings.

VMMap v3.33

This update to VMMap, a tool that reports the virtual memory layout of a process, removes automatic loading of dbghelp.dll under "C:\Debuggers".

second click, when the shape is finalized, the color it's correct.

If I draw over any other program window opened, the temporary line color it's OK.

The desktop background it's a solid color (55, 65, 115).

2. If you start drawing mode and draw something, after you press Esc, the drawing mode is closing with no prompt and you lose what you draw.

I propose to add a dialog when exiting draw mode for asking to save the drawing.

Thank you

Win10 22H2 x64 + ZoomIt 7.1 x64

There are incorrect some character positions in the Thai language.

There are incorrect vowel positions in the Thai language.

ไม่เอก ไม่โท สระอี สระอิ
สวัสดีจ้า

Thank you

Please consider implementing an option on the RDCMan Security tab to set the "enablecredsspsupport" option in the underlying RDP connection. I can add "enablecredsspsupport:i:0" to a .rdp file to forcibly disable client-side attempts to use NLA, which I need to do in some cases when connecting across domains without trusts.

Suggestion: add "temporary notes"

Hi

in a connection I can add "Comments", but IMHO the idea behind is "long lasting information".

I want to suggest a new feature like "temporary notes".

What is it good for?

E.g. I connect to 5 different, but similar user PCs and start maintenance. Of course, there will be some issues to be fixed or to be noticed:

- On PC A, update software XY

- On PC B, remove data from folder ccc and check settings for software b

- On PC C, install new user-settings.

Of course this notes could be handled in another way - a sheet of paper, with Notepad.exe or in a complex Ticket system, but it would be handy and "packed with the related server", and this would be a fine feature …

Regards

Pierre
