🏠 Group Policy Home   ⌃ Windows 10 and Windows Server 2016   🌐 English (United States) ▾   🔍

Turn on automatic detection of intranet

This policy setting enables intranet mapping rules to be applied automatically if the computer belongs to a domain.

If you enable this policy setting, automatic detection of the intranet is turned on, and intranet mapping rules are applied automatically if the computer belongs to a domain.

If you disable this policy setting, automatic detection of the intranet is turned off, and intranet mapping rules are applied however they are configured.

If this policy setting is not configured, the user can choose whether or not to automatically detect the intranet through the intranet settings dialog in Control Panel.

Supported on: At least Internet Explorer 7.0	

Registry Hive	HKEY_LOCAL_MACHINE or HKEY_CURRENT_USER
Registry Path	Software\Policies\Microsoft\Windows\CurrentVersion\Internet Settings\ZoneMap
Value Name	AutoDetect
Value Type	REG_DWORD
Enabled Value	1
Disabled Value	0
