We are nominated for the ATHENE UP@it-sa Award! See you in the final: 23.10.2024, 15:30 live at it-sa.

Test your cyber defenses
<u>before</u> attackers do.

Learn how

Realistic threat emulation

RedMimicry mimics real threat actors to test cyber security defense systems and processes.

Product Brief (English)   **Product Brief (German)**

Comprehensive

Conduct **regular and efficient** tests of your cyber defense systems and Security Operations Centers (SOCs).

RedMimicry features scenarios for Windows, macOS, and Linux endpoints.

Repeatable Scenarios

Test endpoints with **minimal additional effort** in a repeatable manner.

Through multipurpose edge nodes the same systems can act as C2 and delivery infrastructure depending on the selected scenario.

Better than breach and attack simulation

RedMimicry emulates **realistic attack chains** involving multiple distinct payloads and command-and-control endpoints.

View implemented TTPs

DORA Complience

The **Digital Operational Resilience Act (DORA)** mandates Threat-Led Penetration Testing for financial entities.

RedMimicry offers scenarios that enable consultancies to effectively conduct TIBER compliant red team and purple team exercises.

[More on DORA compliance]

Frequent Updates

Stay ahead with updates on **emerging threat** scenarios.

We ensure that purchased playbooks remain operation and continously add new scenarious to the platform.

Growing Partner Network

We work with a growing network of partners that deliver high-end threat emulation services.
