Checking workstations for local admin privileges, open shares, startup time is usually complex and requires an admin. PingCastle's scanner bypass these classic limits.

Prerequisites

Build it

The report can be generated in the interactive mode by choosing "scanner" or just by pressing Enter. Then the list of available scanner is displayed.

As an alternative, the scanner can be run using the command:

```
PingCastle.exe --scanner <type> --server mydomain.com
```

Download an example

The export menu can be triggered in the interactive mode by choosing "export" or just by pressing Enter. Then the list of available export is displayed.

As an alternative, the export can be run using the command:

```
PingCastle.exe --export <type> --server mydomain.com
```

Scanners

There is 6 available scanners.

localadmin	ms17-010	replication	share	smb
startup				

This module enumerates the local admin accounts on the workstations and servers of the domain.
