DnsOverHttpsMode

Contrôle le mode DNS-over-HTTPS

Compatible avec :

- Google Chrome (Android) depuis la version 85
- Google ChromeOS (Google ChromeOS) depuis la version 78
- Google Chrome (Linux, Mac, Windows) depuis la version 78

Description :

Permet de contrôler le mode du résolveur DNS-over-HTTPS. Veuillez noter que cette règle ne définit que le mode par défaut pour chaque requête. Ce mode peut être ignoré pour les requêtes spéciales, telles que celles visant à résoudre un nom d'hôte de serveur DNS-over-HTTPS.

Le mode "off" désactive DNS-over-HTTPS.

Le mode "automatic" envoie d'abord des requêtes DNS-over-HTTPS si un serveur DNS-over-HTTPS est disponible. Il peut, en solution de secours, envoyer des requêtes à risque en cas d'erreur.

Le mode "secure" n'envoie que les requêtes DNS-over-HTTPS et ne permet pas de résoudre les erreurs.

Si cette règle n'est pas définie, le navigateur peut envoyer des requêtes DNS-over-HTTPS à un résolveur associé au résolveur configuré du système.

off = Désactiver DNS-over-HTTPS
automatic = Activer DNS-over-HTTPS avec solution de secours à risque
secure = Activer DNS-over-HTTPS sans solution de secours à risque

Fonctionnalités compatibles :

- Actualisation dynamique des stratégies : Oui
- Par profil : Non

Type de données :

Chaîne
Windows:REG_SZ
Android:choice

Emplacement dans le Registre Windows :

```
Software\Policies\Google\Chrome\DnsOverHttpsMode
```

Nom de préférence Mac/Linux :

```
DnsOverHttpsMode
```

Nom de la restriction Android :

```
DnsOverHttpsMode
```
