Specifies the [MS-PAN]: Print System Asynchronous Notification Protocol, an asynchronous protocol that clients use to receive print status notifications from a print server and send server-requested responses to those notifications back to the server. It is based on the Remote Procedure Call (RPC) protocol, as specified in [C706].

Preview Versions

From time to time, Microsoft may publish a preview, or pre-release, version of an Open Specifications technical document for community review and feedback. To submit feedback for a preview version of a technical document, please follow any instructions specified for that document. If no instructions are indicated for the document, please provide feedback by using the Open Specification Forums ⊠ .

The preview period for a technical document varies. Additionally, not every technical document will be published for preview.

A preview version of this document may be available on the Windows Protocols - Preview Documents page. After the preview period, the most current version of the document is available on this page.
